

## MAMMALS LIST AT KINGFISHER BAY RESORT, FRASER ISLAND

Mammals are warm blooded animals that have hair and feed their young on milk. They may be separated into those that give birth to fully developed live young (eutherian mammals); those that give birth to small embryonic young (marsupials); and those that lay eggs (monotremes).

Most of Fraser Island’s native mammals are small-sized and predominantly nocturnal. These animals can be found in a variety of habitats throughout the island and play an important role in maintaining the ecosystem. Some forage on the ground for insects and plant matter, while others stay high in the trees feeding on nectar produced by flowers. Within the resort, native animals are well represented due to the different local habitats, however you will have to be patient in your search to see them.

### Common Name

### Scientific Name

#### Monotremes

Short-beaked Echidna

Tachyglossus aculeatus

#### Marsupials

Swamp Wallaby  
Feathertail Glider  
Squirrel Glider  
Sugar Glider

Wallabia bicolor  
Acrobates pygmaeus  
Petaurus norfolcensis

#### Eutherian Mammals

Bush Rat  
Delicate Mouse  
False Water Rat  
Water Rat  
Fawn- footed Melomys  
Grassland Melomys  
Long-nosed Bandicoot  
Northern Brown Bandicoot  
Yellow-footed Antichinus  
Dingo

Ruttus fuscipes  
Pseudomys delicatulus  
Xeromys myoides  
Hydromys chrysogaster  
Melomys cervinipes  
Melomys burtoni  
Perameles nasuta  
Isoodon macrourus  
Antechinus flavipes  
Canis lupus dingo

## MAMMALS LIST AT KINGFISHER BAY RESORT, FRASER ISLAND

### Bats

Bats are eutherian mammals and comprise around 25% of all this Class. Fraser Island has 12 different species of bats –4 are megabats (fruit bats) or flying foxes and the remaining 8 are insectivorous bats. Megabats and flying foxes feed on the fruits and blossoms of trees and shrubs (e.g. eucalypts and banksias), have large eyes with excellent night vision and use their sense of smell to find food. Insectivorous bats have very small eyes and so use ultrasonic echolocation for navigation and to detect and catch small insects for food. These smaller bats can be observed over the lagoons at the resort.

#### **Common Name**

- Blossom Bat
- Black Flying Fox
- Grey Headed Flying Fox
- Little Red Flying Fox
- Common Bentwing Bat
- Goulds Long-eared Bat
- Goulds Wattled Bat
- Hoary Bat
- Large-footed mouse-eared Bat
- Yellow Bellied Sheath-tailed Bat

#### **Scientific Name**

- Syconycteris australis*
- Pteropus alecto*
- Pteropus oliocephalus*
- Pteropus scapulatus*
- Miniopterus chreibersii*
- Nyctophilus gouldi*
- Chalinolobus gouldii*
- Chalinolobus nigrogriseus*
- Nyctophilus bifax*
- Saccolaimus flaviventris*

### Marine Mammals

The mammals of Fraser Island are not only well represented in terrestrial (land) environments. Marine mammals may also be seen. The most famous of these is the humpback whale. Each year between August and October, migrating humpback whales can be seen in Platypus Bay. Humpback whales are large mammals weighing up to 45 tonnes and are considered an endangered species. They leave Antarctica and travel north to breed and suckle their young in the warmer waters, often visiting Hervey Bay on their return voyage. Viewing these whales aboard vessels in Hervey Bay is strictly controlled to ensure that interference with these animals is minimised to encourage their return the following year. A cruise through the Great Sandy Strait may allow you to observe other marine animals closer than from the shores. Animals you may see in the Great Sandy Strait include:

#### **Common Name**

- Humpback Whale
- Minke Whale
- Bottlenose Dolphin
- Indo-Pacific Humpback Dolphin
- Common Dolphin
- Dugong

#### **Scientific Name**

- Megaptera novaeangliae*
- Balaenoptera acutorostrata*
- Tursiops truncatus*
- Sousa chinensis*
- Delphinus delphis*
- Dugong dugong*
